The alcohol analysis was performed in accordance to California Code of Regulations "Title 17" compliance by a qualified analyst in the Forensic Toxicology Laboratory, Forensic Laboratories Division, County of Los Angeles Department of Medical Examiner.

Enzyme-linked immunosorbent assay (ELISA) provides only a preliminary analytical result that is contingent upon a confirmatory test. A "presumptive positive" (PP) signifies a detection of a drug class and must be confirmed by additional testing for true identification and/or quantitation of specific drug(s) present in the specimen.

Per the Department's Evidence Retention Policy, the blood specimen(s) will be retained for one year (minimum) and all other specimens six months (minimum) from Postmortem Exam.
